

As a part of your comprehensive eye examination, it is necessary to perform a REFRACTION. This test is a diagnostic test that allows the doctor to determine if your eyes are working together correctly, what your best possible vision is, if the cause of your blurry vision is due to a glasses need or other ocular conditions. This is also the test used to determine your most accurate glasses prescription.

Medicare and most private insurances do not routinely cover the cost of your REFRACTION. Since it is a non-covered service, we are required to charge you for this service. The cost is \$105. As a courtesy, if you pay for this service on the day of your exam we can discount your cost to \$65. If you are unable to pay today, and we bill you for the service you will not be eligible for the discount and will be required to pay the full \$105.

This service will be provided routinely for all patients including those who wear glasses or contact lenses.

We appreciate the opportunity to serve you.

Glenn C. Campbell, M.D.
